

Node.JS

Ex - Advanced JS

1. You have the following array:
`[{ name: 'Avi', age: 20 }, { name: 'Ron', age: 30 }, { name: 'Dana', age: 25 }]`
 - Print the names of those who are 22-32 years old
 - Get their names length
2. You have the following array of arrays: `[[1, 6, 3, 9], [6, 21, 5, 12], [4, 11, 23, 1]]`
 - Create a function that receives that array, and returns an array of the biggest numbers from every inner array.
 - From the array of the biggest numbers, print only those who are between 15 and 25.
3. Create a function that receives the following array `[1, 2, 3, 4, 5, 6]` and returns the average after 1 seconds.
4. Write a function called `funcA` that receives the array of arrays from ex2 and a Promise that returns the total sum after 2 seconds.
Write a function called `funcB` that call `funcA` and returns the total sum returned from `funcA * 2`.
Call `funcB` from the main code and print the result.
