

HW – Component Life Cycle

1. Create a “Movies” component that render the first 10 “movie” child components based on the data pulled from <https://api.tvmaze.com/shows>

Each “movie” component get an id from his parent and present it's name and Picture (pulled from image.medium key)

2. You need to build a component that presents a table of users and their purchased products as follows :

Name	Email	Products
john doe	john@gmail.com	
david morrison	morrison@gmail.com	
kevin ryan	kevin@gmail.com	
don romer	don@gmail.com	
derek powell	derek@gmail.com	
david russell	david_r@gmail.com	
miriam snyder	miriam@gmail.com	
william hopkins	william@gmail.com	
kate hale	kate@gmail.com	
jimmie klein	jimmie@gmail.com	

The name and the emails of the user comes from <https://fakestoreapi.com/users>

The user's purchased orders (carts) come from <https://fakestoreapi.com/carts>

The products image come from <https://fakestoreapi.com/products>

Verify you save all users, carts and products are save in the component's state before rendering the data
