Node.JS

Ex - Micro Services Architecture

Create a "service" that receives a username as a parameter and returns the following data about this user:

- His name and email from the following REST API:
  https://jsonplaceholder.typicode.com/users

- A list of the titles of his first 10 tasks from the following REST API:
  https://jsonplaceholder.typicode.com/todos

- A list of his phones from the following JSON file:

```json
{
  "users": [
    { "username": "Bret", "phones": ["055-555", "052-222"] },
    { "username": "Antonette", "phones": ["053-333", "054-444"] }
  ]
}
```

Use BLL & DAL as necessary, and a main file for calling the BLL.
