React – Ex – Performance

Ex1

Create a components called "Users". This component get all users data from http://jsonplaceholder.typicode.com/users REST API.

This component renders dynamically a list of child components called "User" . Each User comp gets from his parent a json with the user name, email address and id and presents them.

Each "User" component renders dynamically a list of 3 "Task" component which presents data (title & completed) about a task of this user. The data pulled from https://jsonplaceholder.typicode.com/todos REST API

Verify unnecessaries rendering !
